Do you wish your hair was growing, healthy and fresh..?

Hair loss and hair thinning are common concerns for both men and women. Over the years of taking care of patients' cosmetic concerns and helping my patients age gracefully and naturally, I came to realize that there was one major issue often ignored and overlooked- thinning hair. I no longer overlook this issue. That is why I have started a program focusing on addressing hair thinning and loss at Charlotte Skin & Laser.

Elizabeth Rostan MD

LEARN MORE

As your hair loss provider, our goals include

- Defining the cause of your hair loss and offering options for treatment to increase the fullness and thickness of your hair as well as to prevent further thinning and loss.
- Developing trust and demonstrating that we care. We aim to establish trust in all our relationships through honesty, transparency, compassion and empathy.
- Delivering expert level care as we continue to educate ourselves on the latest treatments for hair growth and hair loss prevention.
- Creating a customized plan for you that addresses the cause of your hair loss and matches your budget and motivation.
- We combine our clinical expertise with state-of-the-art technology to offer you customized care and combinations of treatments for best outcomes.

Success Story “Got my female swag back”

When Devan came into Charlotte Skin & Laser, she was conscious of her hair loss but didn't see the early signs of her condition. Dr. Rostan identified that Devan had CCCA (Central Centrifugal Cicatricial Alopecia), a form of scarring alopecia common in African American women. She prescribed medications to assist hair growth (or something like this), and Devan also underwent several PRP treatments to help revive and maintain control of the alopecia.

Initially, Dr. Rostan recommended a hair transplant as a next step, but she responded so well to the medical treatments that she continued to manage her treatments throughout her journey. After several months, Devan feels more confident and educated about her condition.
